BE THE CHANGE

*CUT BACK THE USE OF PLASTIC
AN ESG INITIATIVE*

Highlights

EarthSafe Global LLC is a mainland Company that focuses on sustainable products and follows the ESG (Environmental, Social, and Governance) criteria for the ethical reduction of global carbon footprint. We are focused on replacing the use of plastic bags with cotton bags, which makes a better and more sustainable solution. Cotton bags are eco-friendly and the best alternative to one-time plastic bags currently in use.

With the world waking up to the harmful effects of plastic bags, it's high time we switch to cotton bags that are reusable, sturdy, and multi-purpose. The total amount of water and other natural resources required for cotton production is also minimal. Keeping ESG practices in mind, around 4 million cotton bags are currently being produced every month at our facilities-providing jobs and a lifeline to over 800 marginalized women in Southern semi urban/rural India who make up 90% of our workforce. Our product range includes Basic bags, Corporate bags, Fashion bags, and Utility bags. The best part is that they can be designed and customized according to the needs of our conscious clientele.

Facility

Along with our associate partners in Bangalore, EarthSafe Global has 3 factories running in accordance with ESG guidelines. We are a team of highly-experienced professionals from the textile industry, having in-depth knowledge of sales and marketing with entrepreneurial backgrounds. Find more information about us at: www.earthsafeglobal.com

Our solution

- ▶ On a global scale, 5 trillion single-use plastic bags are produced every year
- ▶ 300 million tons of plastic waste is produced globally every year. That's roughly equal to the weight of the entire human population.
- ▶ Only 9% of plastic waste gets recycled. 12% gets incinerated. 79% accumulates in the natural environment.
- ▶ Plastic is choking our ecosystem and suffocating our flora and fauna. Marine life, in particular, has been affected.
- ▶ Thin grocery plastic bags, straws, cups, plastic glasses, non-woven plastic, etc., are common single-use plastics polluting the environment.
- ▶ Businesses, food, drink, retail, and e-commerce industries all need large amounts of bags - how do we replace these plastic bags?
- ▶ Cotton bags which consume very less water for production and are biodegradable, are a natural choice. Cotton bags are reusable, machine washable, easy to store and carry.
- ▶ Cotton bags bring minimal change to our living and maximal impact on nature and conservation of endangered species.
- ▶ Cotton bags use lesser water and energy for production. It is an excellent oxy-biodegradable alternative.
- ▶ We focus on 4 segments - Basic bags, Corporate bags, Fashion bags and Utility bags.
- ▶ The intention is to ease the burden on Mother Earth, make better choices, and inculcate the mindset of Carrying Responsibly. Say Yes to eco-friendly alternatives.
- ▶ Our strength is the 2 factories on the outskirts of Bangalore and 1 factory in Mandya, in Karnataka, India. With over 200 machines, the production capacity is over 4 million bags a month.
- ▶ We have a state-of-the-art facility for in-house printing and packaging. Our largest clientele includes high-end supermarkets, textile emporiums, jewelry showrooms, and duty-free shops in 26 international airports.
